F25HP

The Yamaha F25 is widely recognised as the lightest 25-horsepower outboard on the market, delivering outstanding power-to-weight performance in a truly portable package. Designed for serious boaters who need real performance without the bulk, the F25 pushes the limits of what a compact outboard can do.
For the first time in Yamaha four-stroke history, the F25 introduces a **battery-less Electronic Fuel Injection (EFI)** option—offering easier starting, improved fuel efficiency, and more refined overall performance in all conditions.
With a wide range of configurations available, the F25 can be tailored to suit almost any setup, including tiller or forward control, manual or electric start, and mechanical tilt or power trim and tilt.

A variable trolling function (on forward control models) also allows precise low-speed control, making it ideal for fishing applications where accuracy matters.

Features & Benefits

- Industry-leading lightweight 25HP design
- Advanced EFI system (battery-less option available)
- Excellent fuel economy and smooth, responsive power
- Easy starting and reliable performance in all conditions
- High power-to-weight ratio for outstanding portability
- Variable trolling control for precise low-speed fishing
- Manual or electric start options available
- Mechanical tilt or power trim & tilt options (model dependent)
- Forward control or tiller handle configurations
- Freshwater flush system for easier maintenance
- Powerful 16-amp alternator for electronics support
- Durable alloy propeller
